

Floww drops - product information

How the drops work

Floww drops are bioresonance drops that work on a purely energetic non-homeopathic basis by delivering multi-bioresonant equivalences. Bioresonant equivalences are positive frequencies that resonate at the level of the pathogenic cause.

Floww drops are specially designed to reverse adverse changes in the structure of the cell caused by (non- ionising) radiation. When the human body is in an environment that contains significant levels of radiation, its subtle physical energies can be disturbed. We believe that when cells are affected by radiation they can no longer absorb the substances they need, such as oxygen, nutrients, vitamins and minerals. The cells eventually die and over a period of time this affects the vitality of the organs that are affected. The functioning of the organs is gradually impaired and this ultimately results in some form of 'disease'.

Floww drops serve two purposes:

1. They repair damage to the structure of the cell as far as possible.
2. They protect cells against radiation.

How to use Floww drops

Floww drops in combination with another form of therapy

1. When first *starting* a course of therapy.

Once the cells are no longer exposed to radiation, or if exposure to radiation is reduced:

- a. The chosen therapy is likely to be more effective.
- b. The complaint that led the patient/client to seek treatment sometimes clears up spontaneously.
- c. The underlying causes of the complaint that that might otherwise have remained hidden can be identified. This may mean that a different or additional course of therapy is required.

2. *During* a course of therapy.

Floww drops in combination with other Floww products

3. When first *starting* to use Floww products.

Floww drops reduce the withdrawal symptoms that some people experience when they first start to use other Floww products. It is important to note that Floww drops can also cause withdrawal symptoms, especially in people who are hypersensitive to electromagnetic fields. (See 'Withdrawal symptoms' below.)

4. As a *supplement used in addition to* other Floww products (especially for those who are hypersensitive to electromagnetic fields):
 - a. Before a flight, because you may not be allowed to carry the pocketFloww in your hand luggage.
 - b. Before or after prolonged use of equipment that emits radiation such as mobile phones and computers.
 - c. If you have been, are, or will be in an environment that contains high levels of radiation.

Floww drops can also be used on their own

5. Floww drops can also be used on their own to provide protection against radiation *for short periods*, possibly while you are on holiday or while you are travelling for example. (If you have a pocketFloww you do not need to use Floww drops too.)

Please note that Floww drops are not designed for long-term use. Prolonged use of Floww drops can affect the body's self-regulating system. Other Floww products are specially designed to provide ongoing protection against radiation. You can find more information about other Floww products on the www.floww.com website.

Withdrawal symptoms

- During the first week some people experience so-called 'withdrawal symptoms'. As a result of the use of the Floww drops, the body is no longer being exposed to the distorted frequencies to which it has become accustomed. This can result in withdrawal symptoms which can include mild headaches or nausea.
- We recommend that you drink plenty of (spring or mineral) water for the first two weeks. Adults should drink at least 1.5 litres of water per day. Children over and up to the age of 12 should drink a litre and half a litre of water per day respectively.
- For advice on how to reduce withdrawal symptoms see under 'Please note' in the following paragraph.

Dosage

- General dosage:
10 drops under the tongue once a day. Ideally before going to bed.
- Children up to the age of 11:
5 drops under the tongue once a day

Please note

To reduce the possibility of withdrawal symptoms we recommend that you start with 2 drops a day and build up the dosage to 10 drops a day over a period of two weeks. If you find that you are not experiencing any adverse effects, you can add another 2 drops to the dosage every other day. If you start to experience withdrawal symptoms, simply reduce the dosage by 2 drops and continue with that dosage until the symptoms disappear. You can then start to increase the dosage by 2 drops a day up to a maximum of 10 drops a day.

For children start with 1 drop a day and increase the dosage by 1 drop every other day up to a maximum of 5 drops a day.

To treat exposure to high levels of radiation dissolve the Floww drops in water

If a person is habitually exposed to high levels of radiation they may find that they experience withdrawal symptoms from the first day that they place two drops under the tongue. If this is the case, rather than placing the drops under the tongue, we recommend that you dissolve the drops in approximately 20cl of (spring or mineral) water while you build up the dosage. Start with 2 drops a day and build up to 10 drops a day over a period of two weeks as described above. For optimal effect the drops should eventually be taken under the tongue.

Composition of the Floww drops

From a scientific point of view Floww drops consist of more than 99% spring water and less than 1% (ethanol) alcohol. A composition of frequencies has been added to the spring water.

Other Floww products are specially designed to provide ongoing protection against radiation in the home, at work and en route. For more information about these products please visit our website, www.floww.com

Disclaimer

Floww products are not medical devices or treatments. If you have a physical ailment, it is always best to seek medical advice. Floww products should only be used as indicated in the accompanying information supplied by the Floww Company. We also refer you to our General Terms and Conditions, which can be downloaded from our website, www.floww.com, or sent to you on request.
